Concept & Target

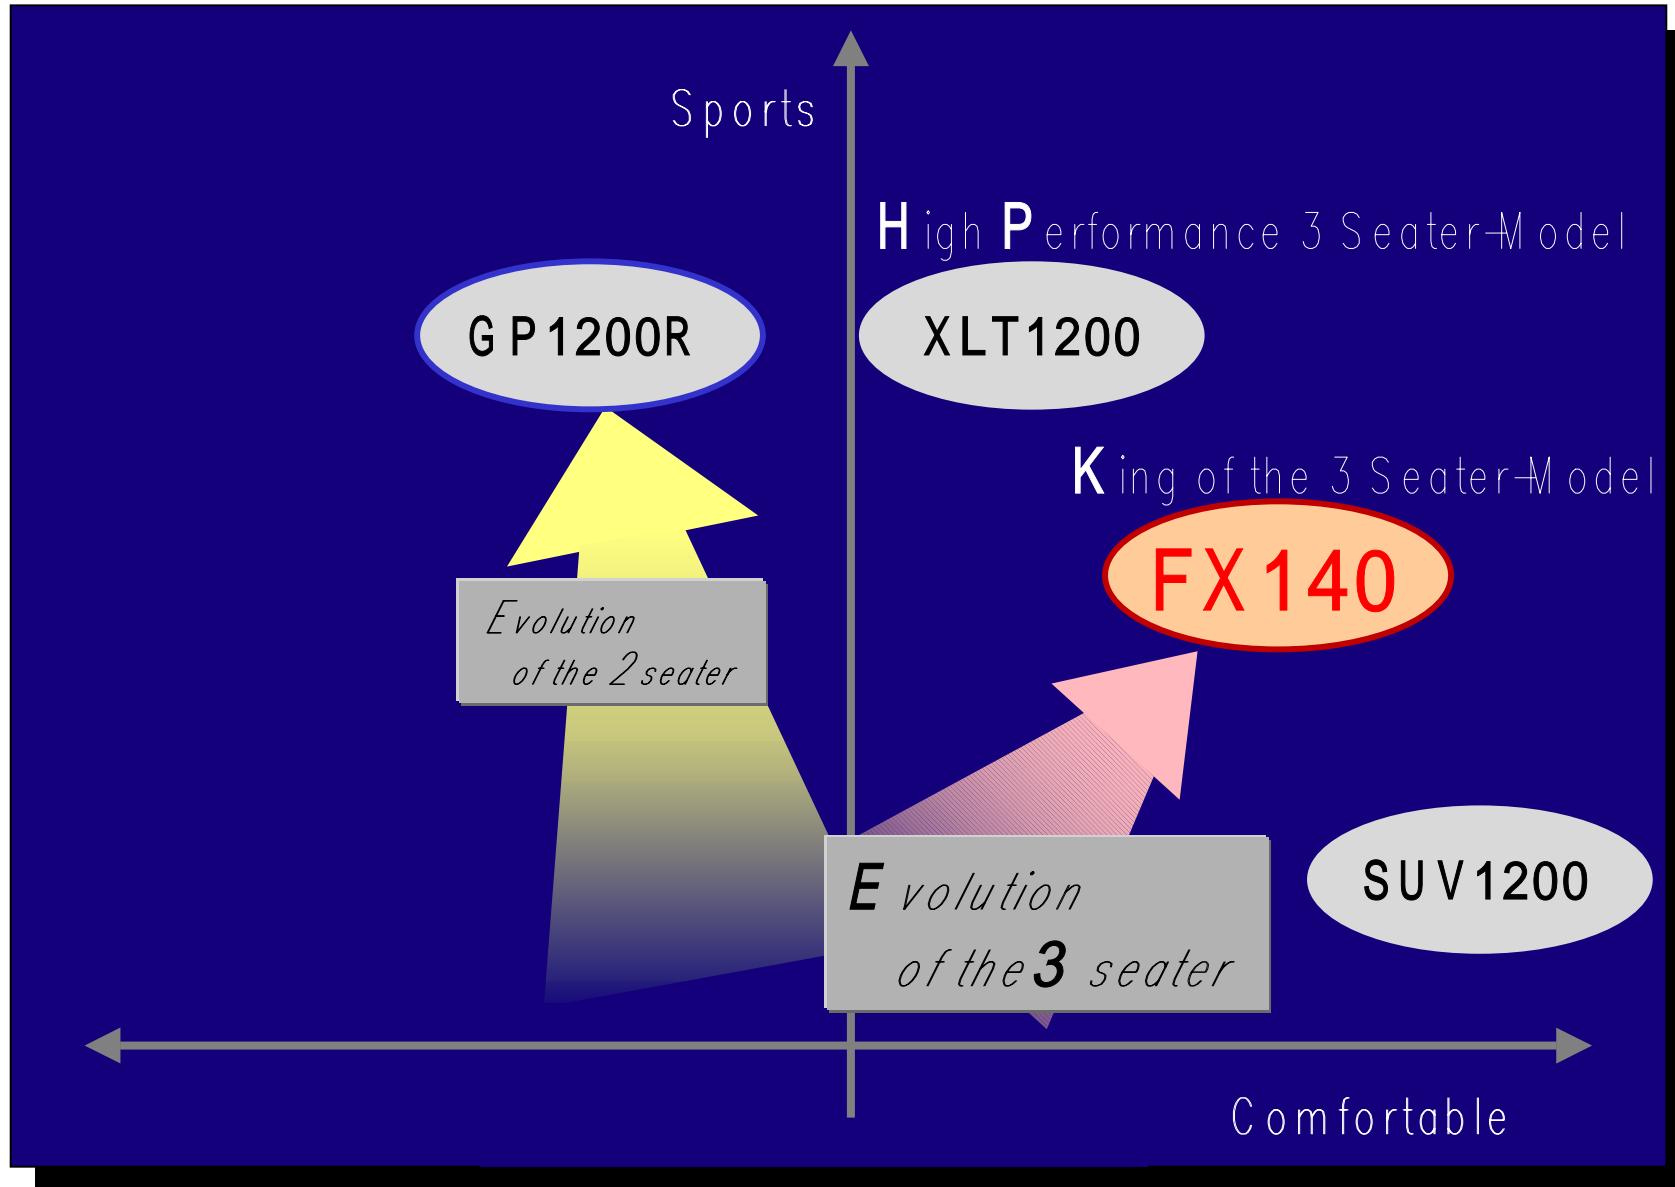

## Next Generation Three-Seater

Which harmonized  
environment and PW C fun character

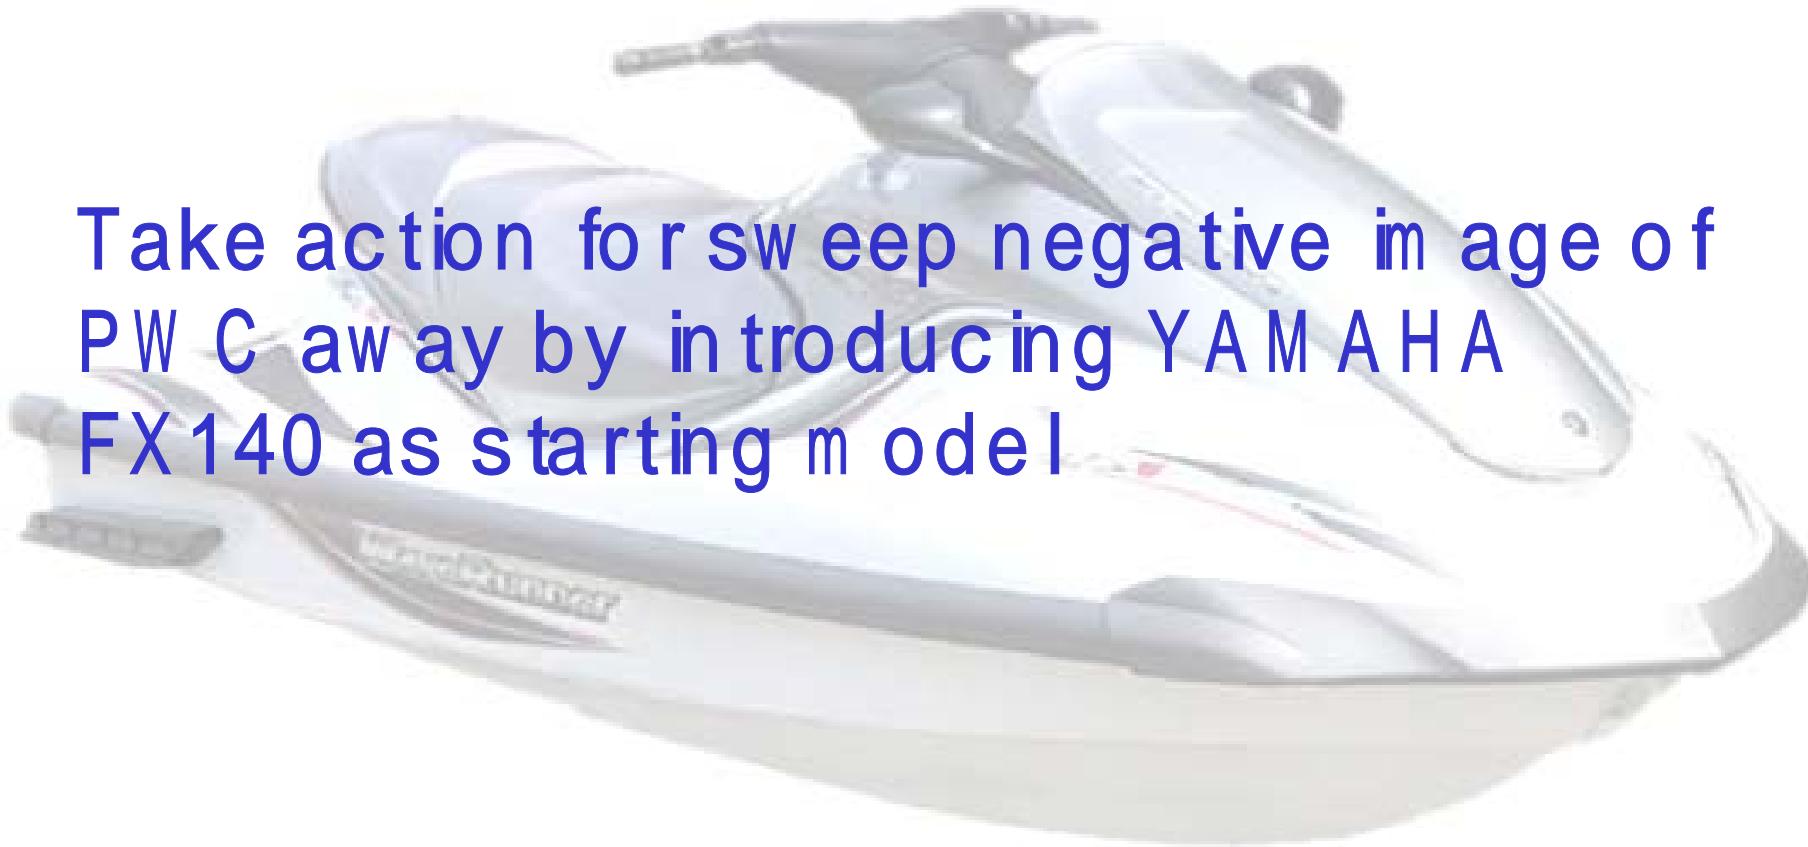

# Model Positioning in Market

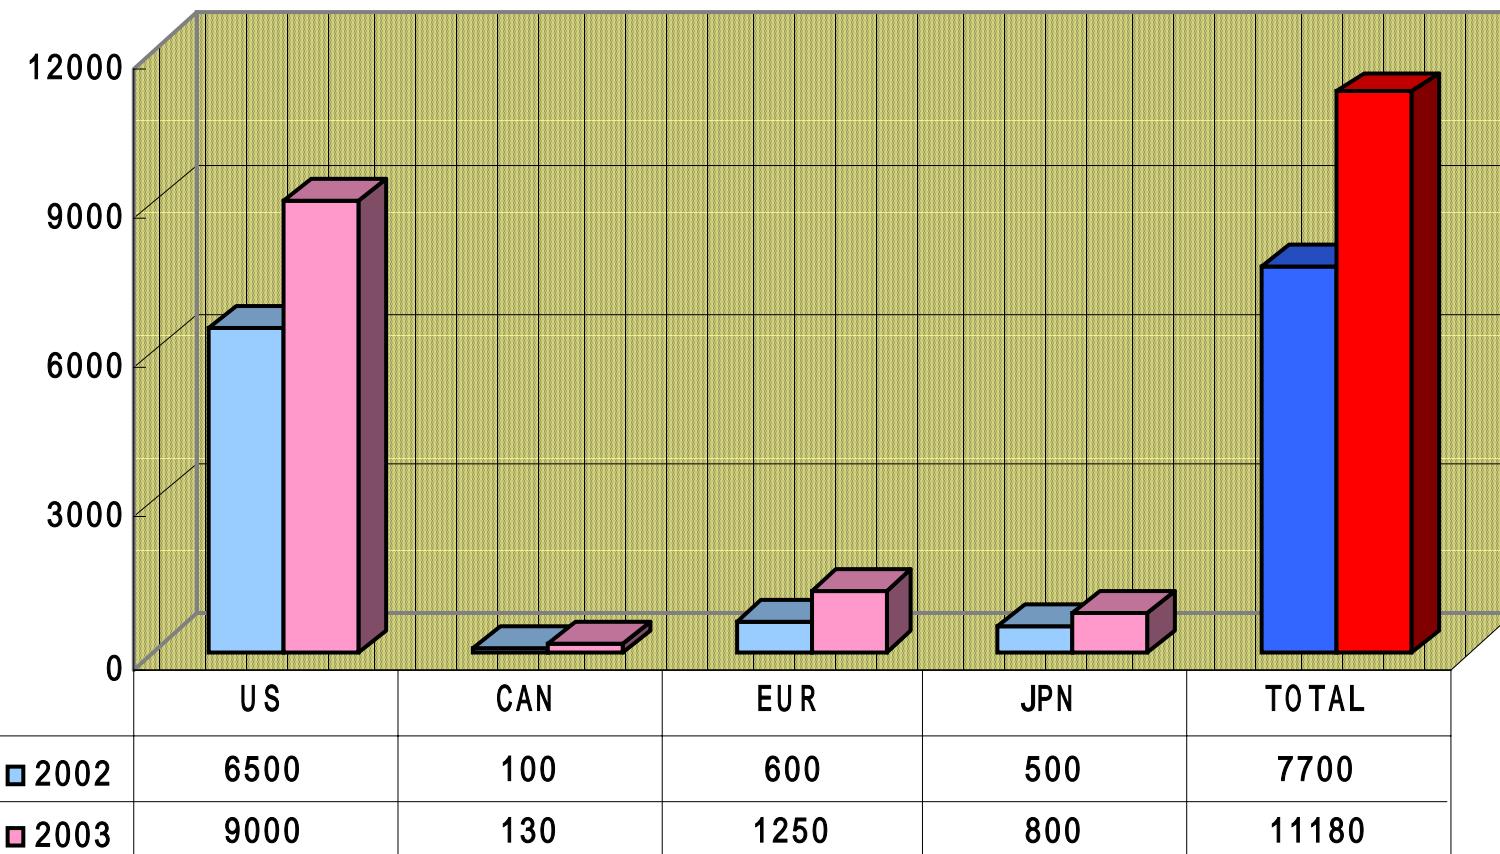

Active approach to gain the positive image of PWC

Take action to sweep negative image of  
PWC away by introducing YAMAHA  
FX140 as starting model

| Dry Weight :          | 362kg             |

WaveRunner EX-140

# Engine

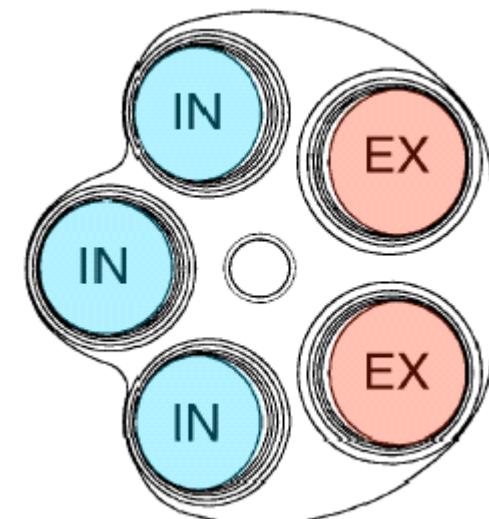

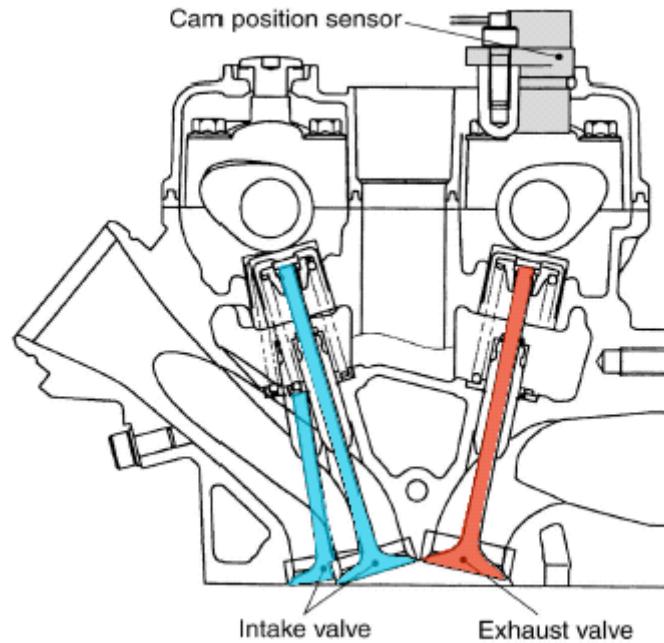

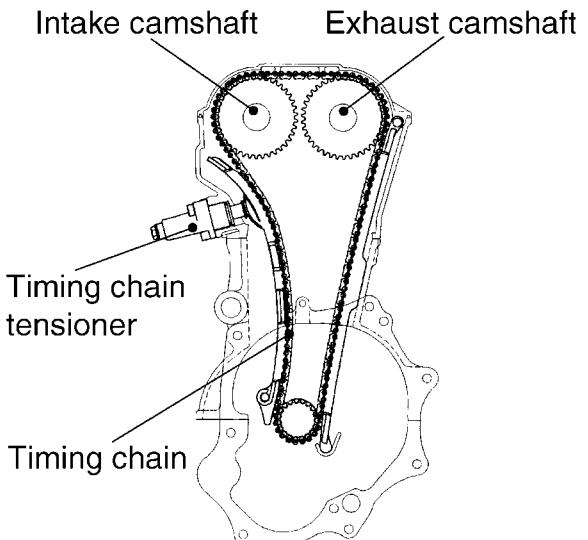

**MR-1**

# Cylinder Head and Valve Train

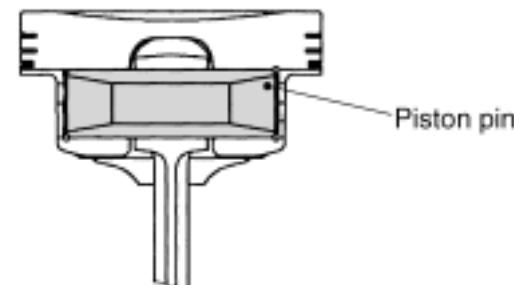

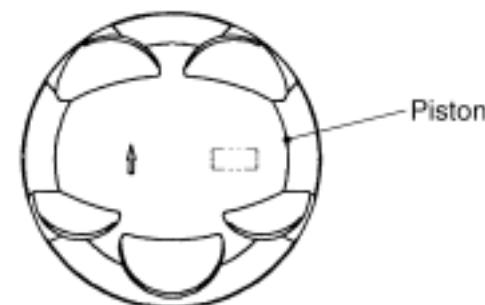

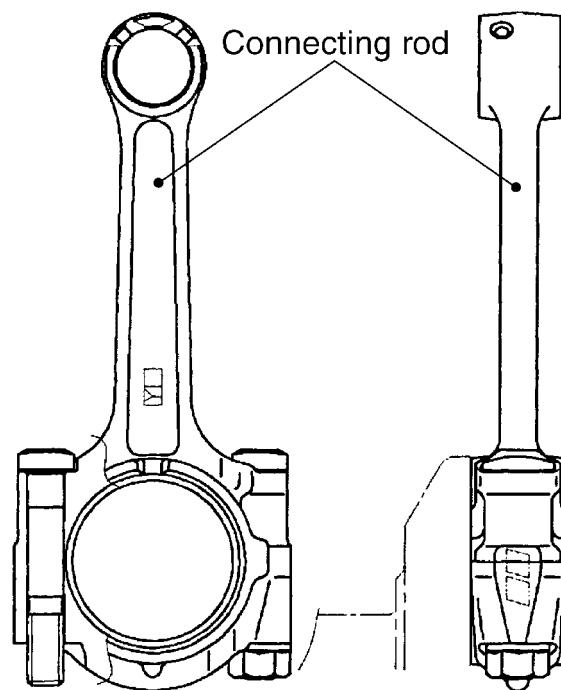

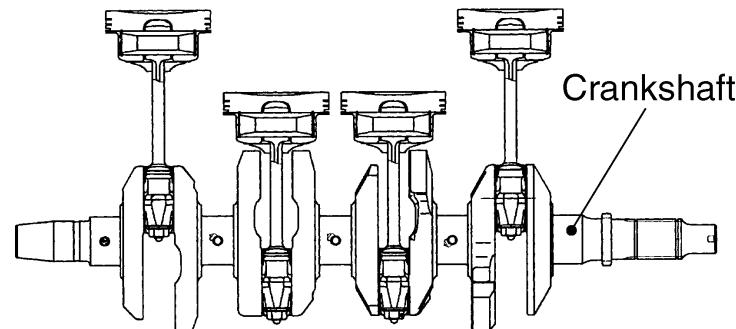

- 3 intake valve and 2 exhaust valves
- Double overhead cam shafts
- Cam position sensor

# Crankshaft and Pistons

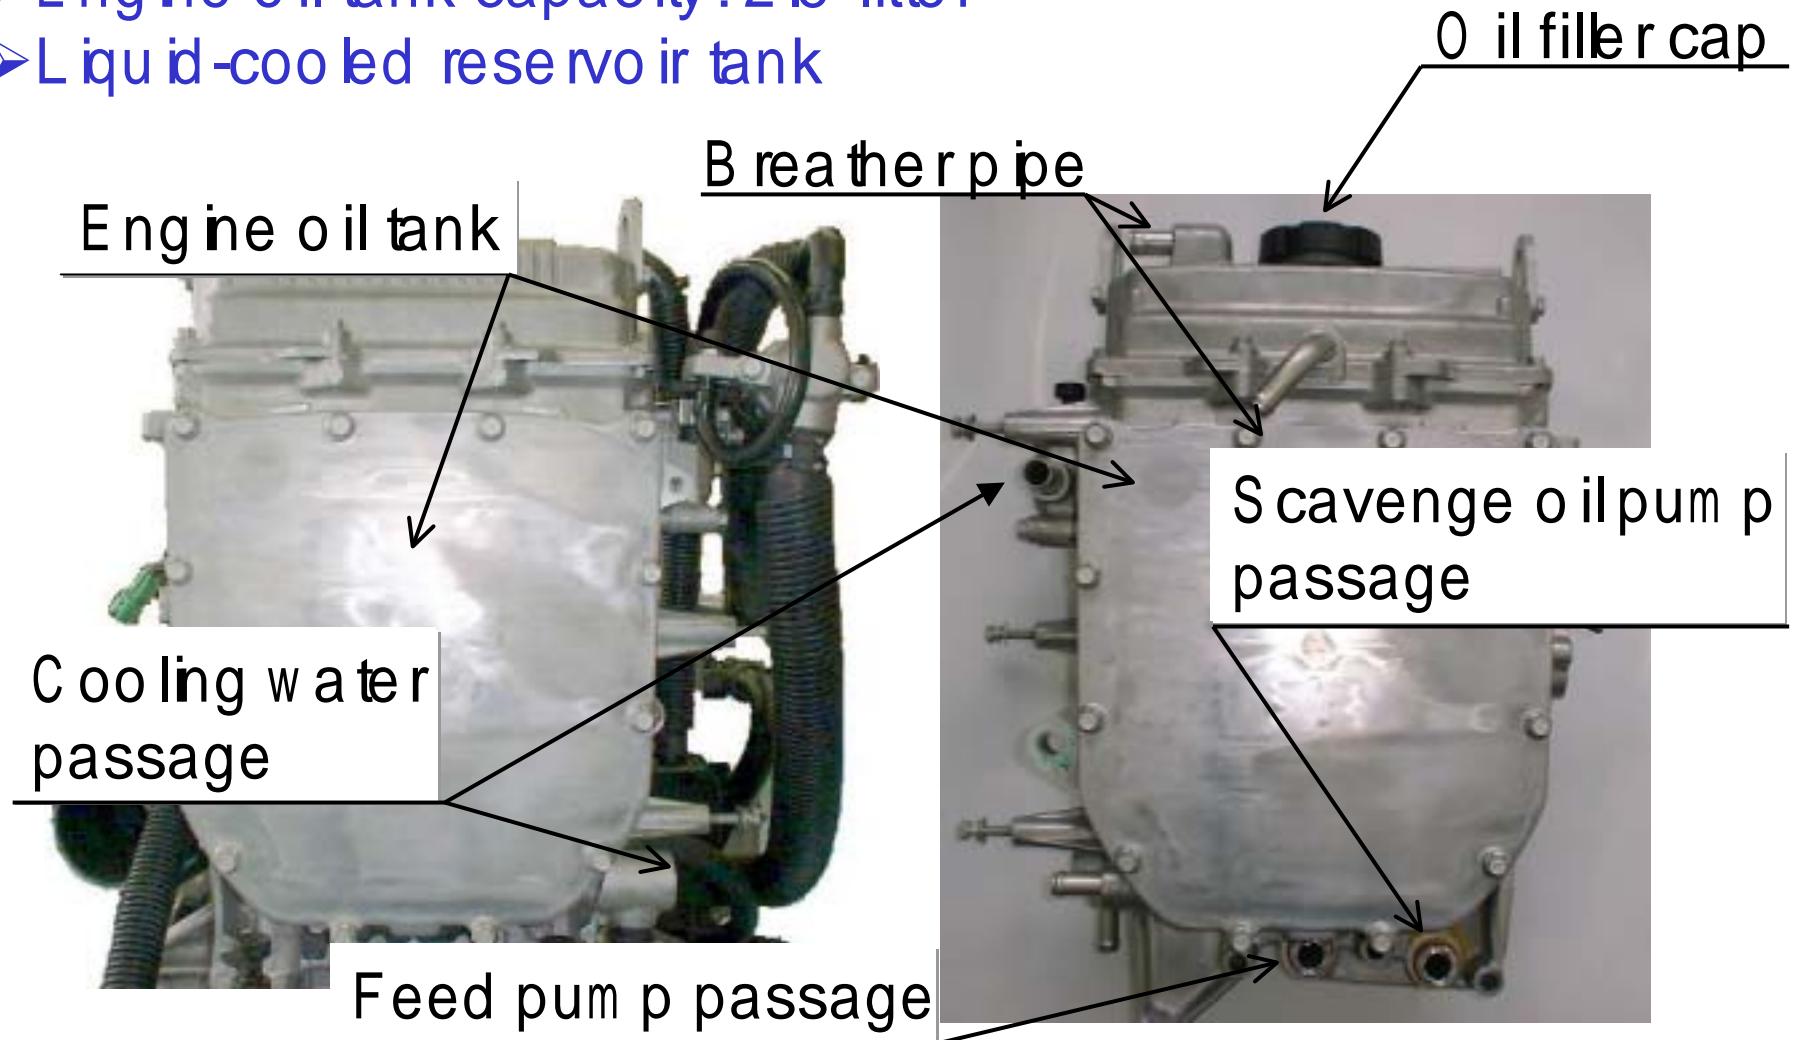

- Lightweight piston, piston pin and connecting rod
- High compression ratio realized with piston head shape

## Lubrication

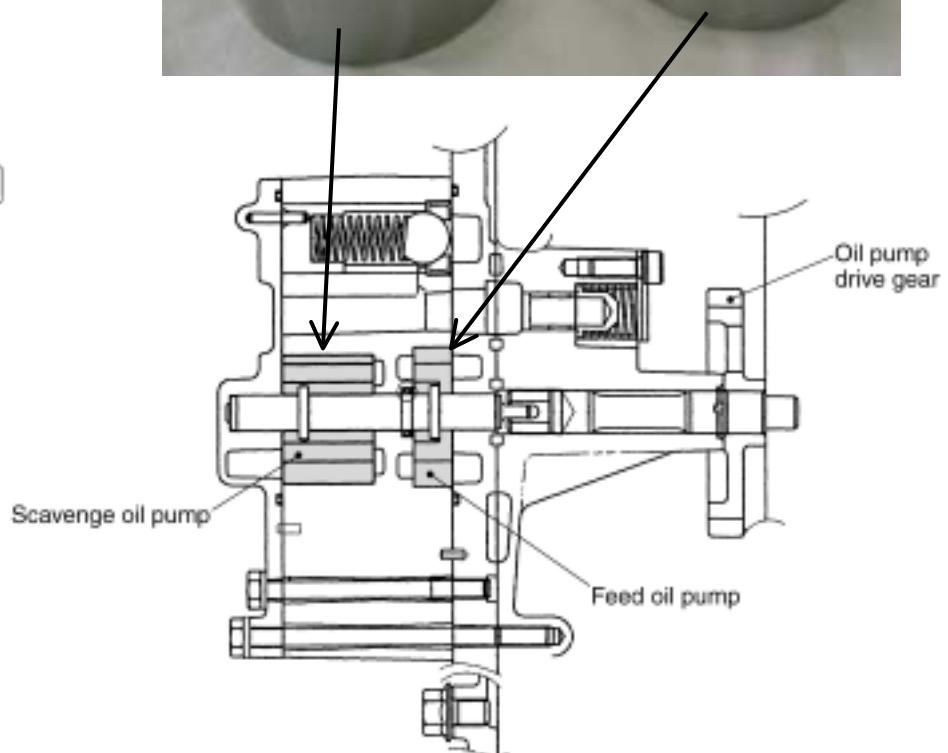

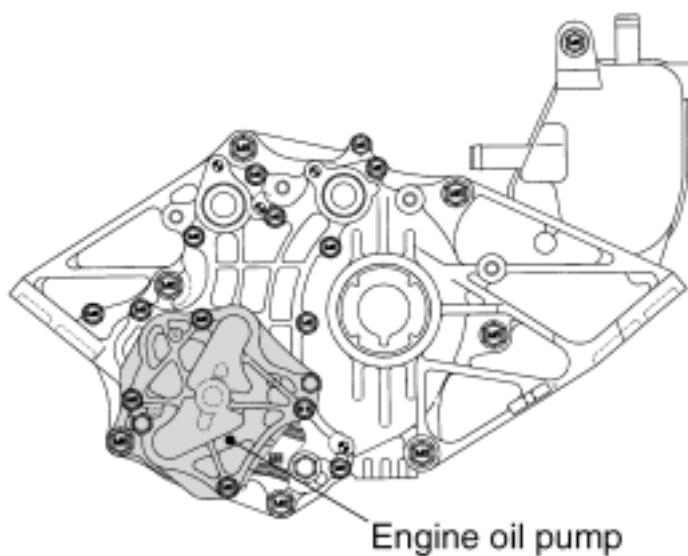

- Dry sum p engine oil system
- Engine oil tank capacity: 2.8 liter
- Liquid-cooled reservoir tank

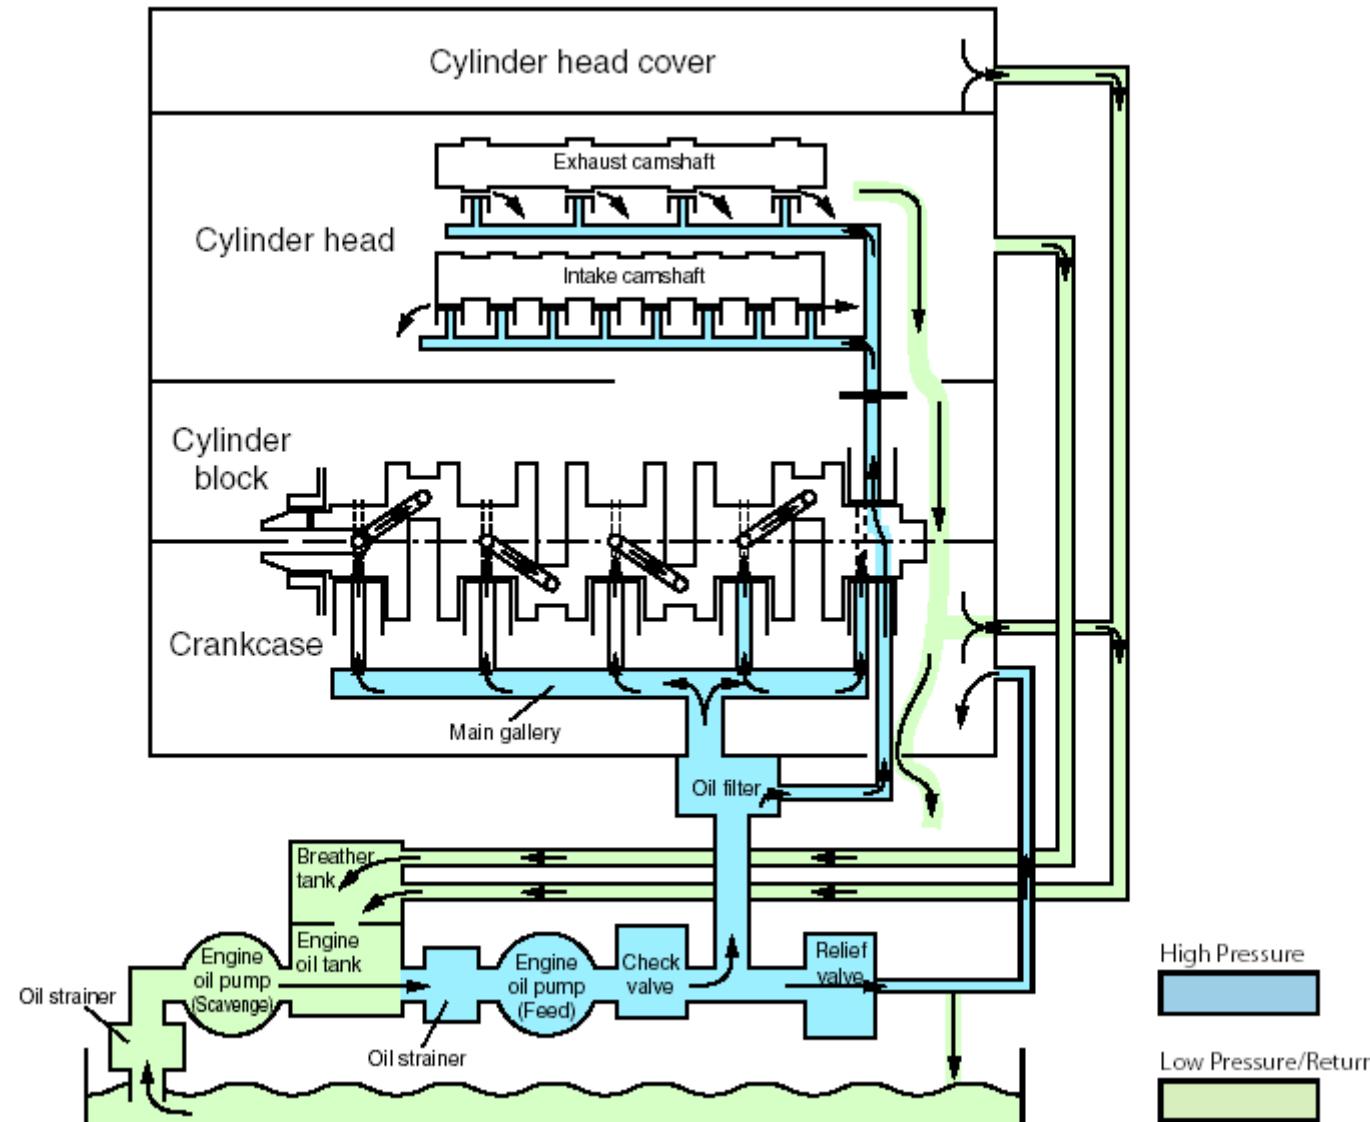

## Lubrication

- The engine oil pump is driven by the same axle as the scavenge oil pump and feed oil pump.

# Oil flow diagram

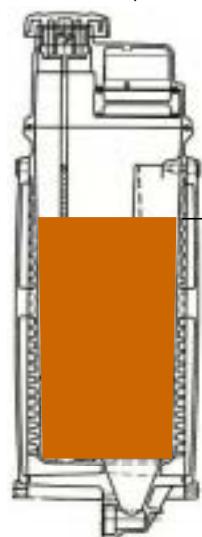

# Lubrication

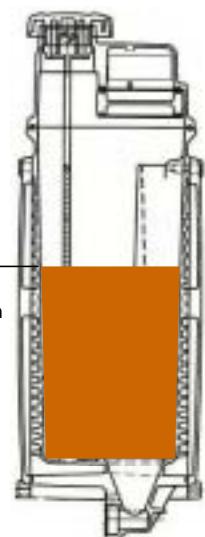

## Mechanism of Oil Overflow Problem

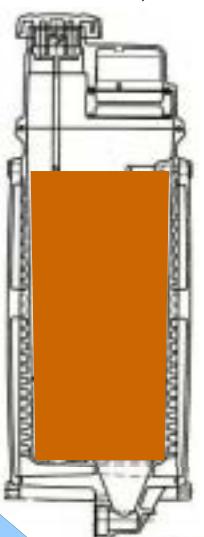

Standard Oil Level with 4.3 liter included volume inside cylinder block.  
(Normal oil temperature)

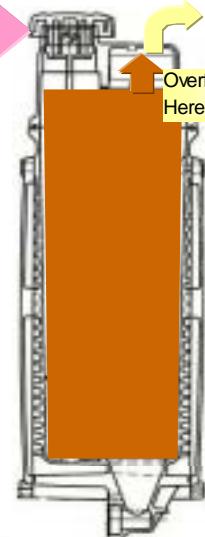

Oil Level after doing the instruction of pre-prod.  
(= check point after 2 minutes' trolling from cold start)

Oil Level after refill  
(Total amount is more than 6 L included volume inside C/B block at this situation)

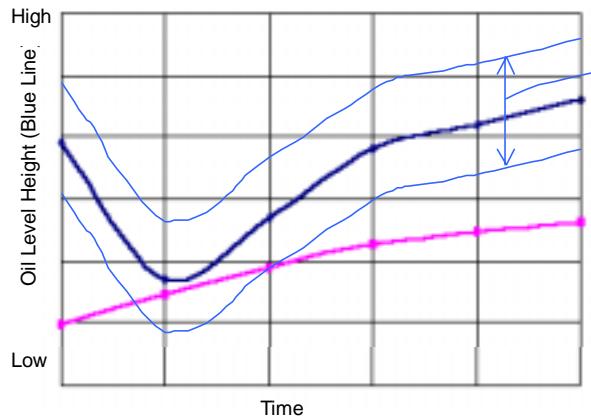

Oil Level during operation  
(Hot Oil Trolling just after WOT)

Overflow to this room.  
Here leads to intake box.

If no refill oil  
No overflow happen.  
This means that  
instruction was not  
proper.

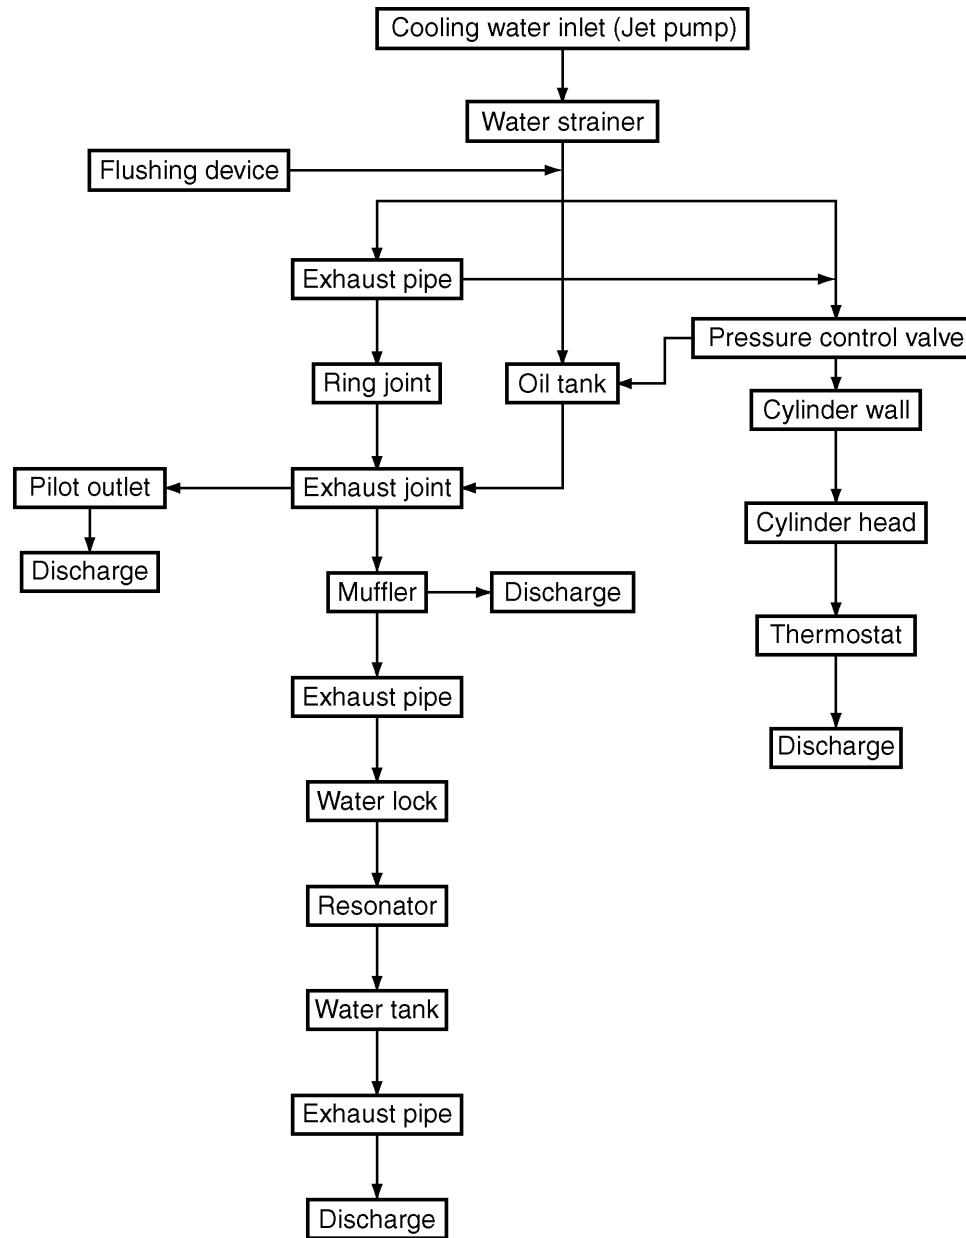

Oil Level Change after Starting Engine

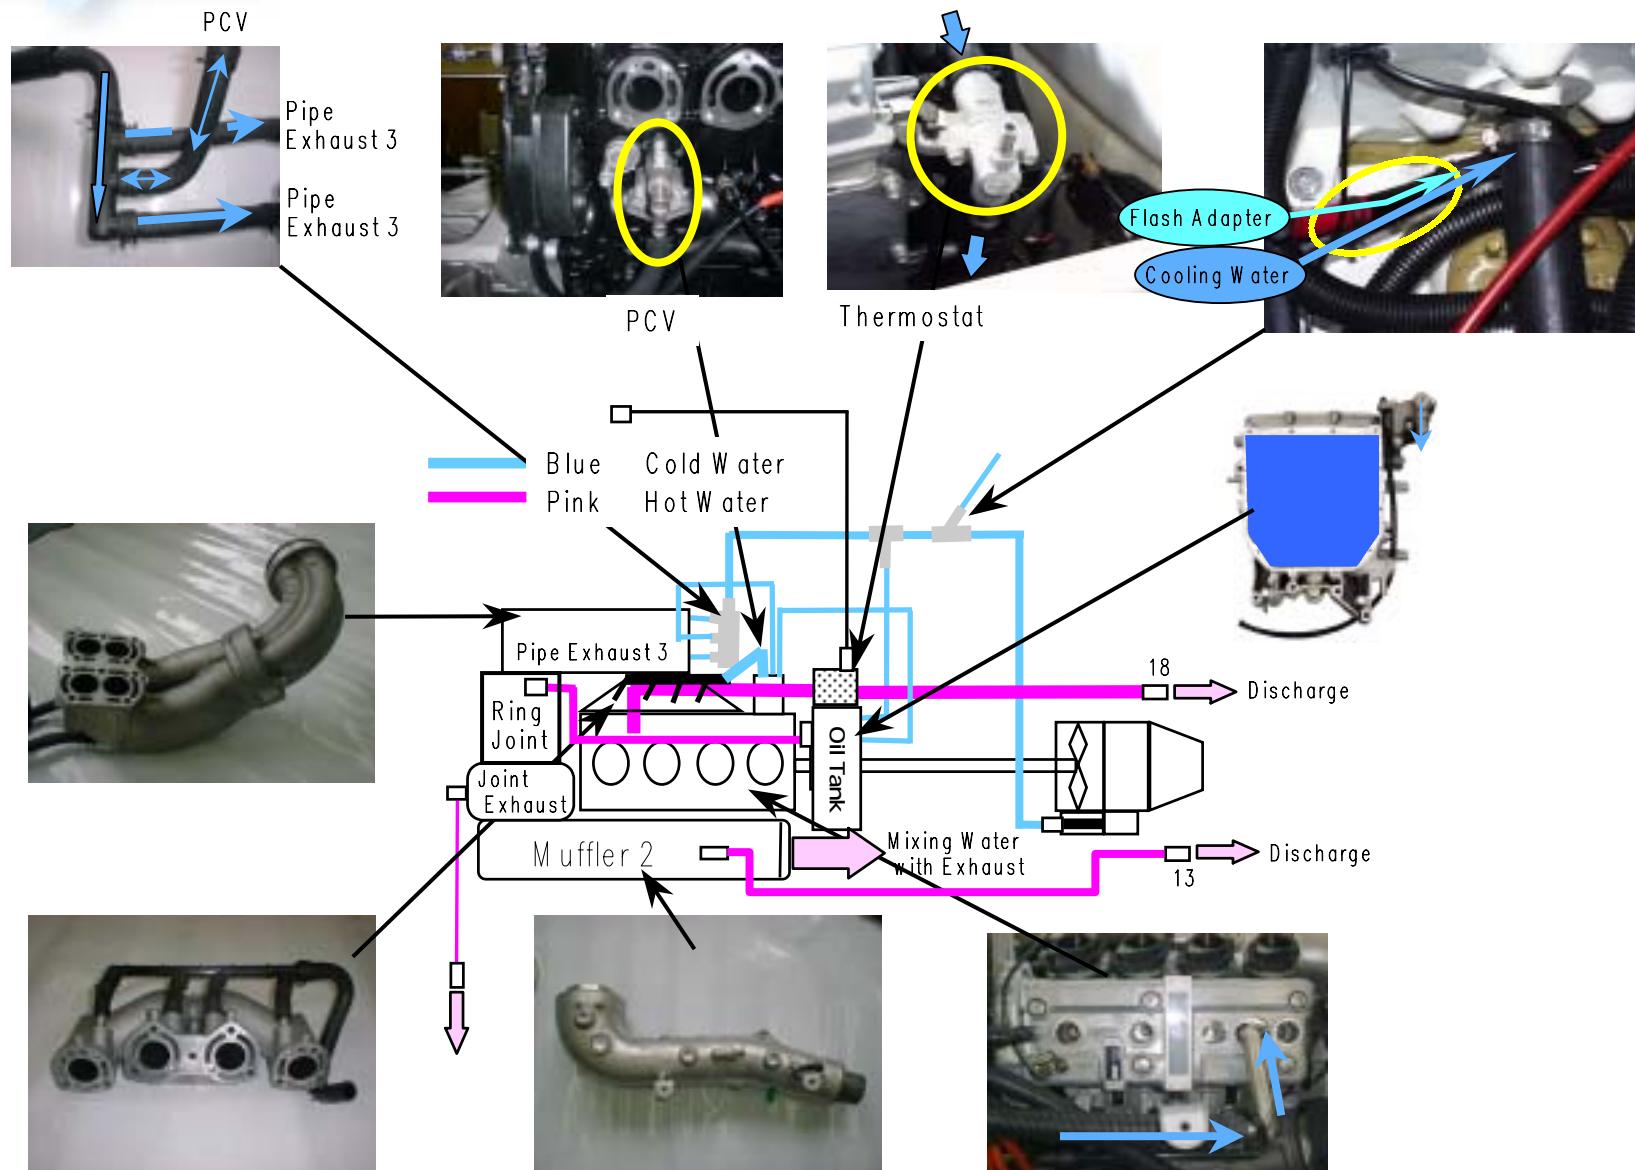

Height varies upon the volume of oil inside cylinder block.  
Plus, variation depends on how to stop engine due to dry sump.  
(ex. Immediate stop after WOT, stop after racing, long troll, and so on.)

# Cooling system

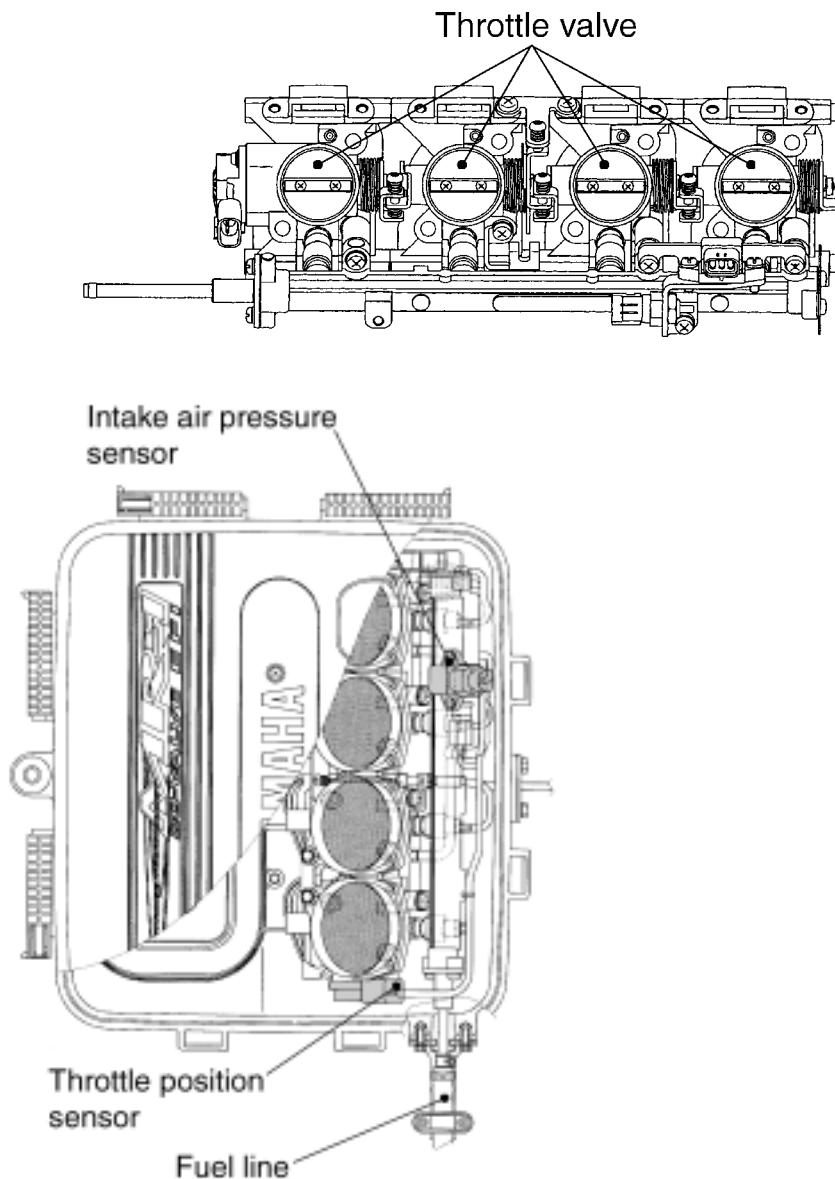

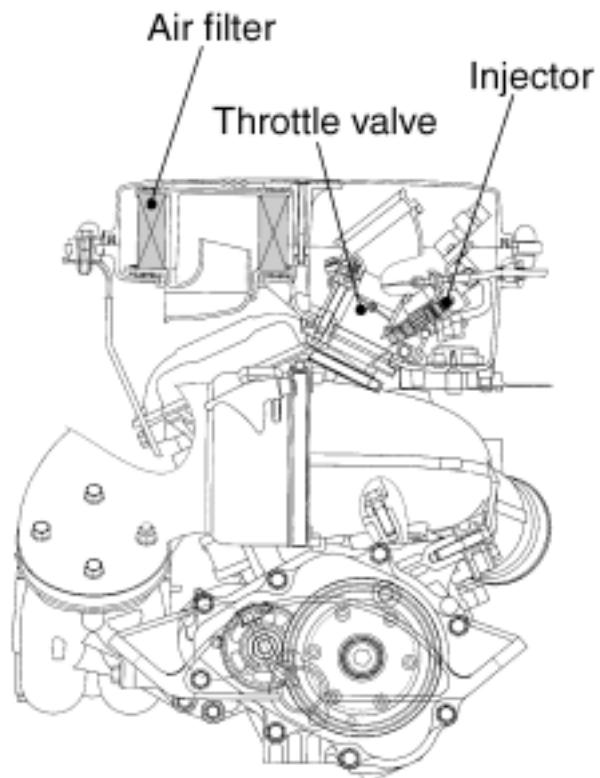

# Cooling system

# Intake

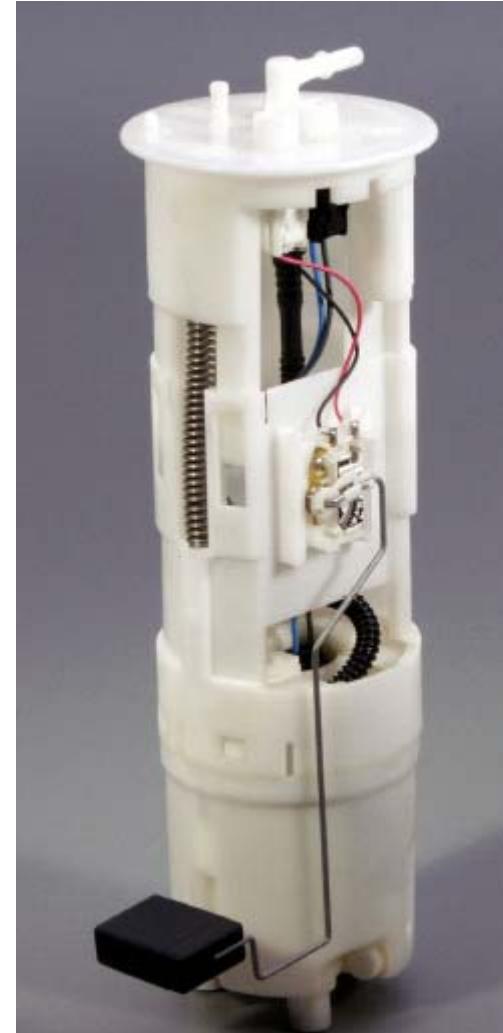

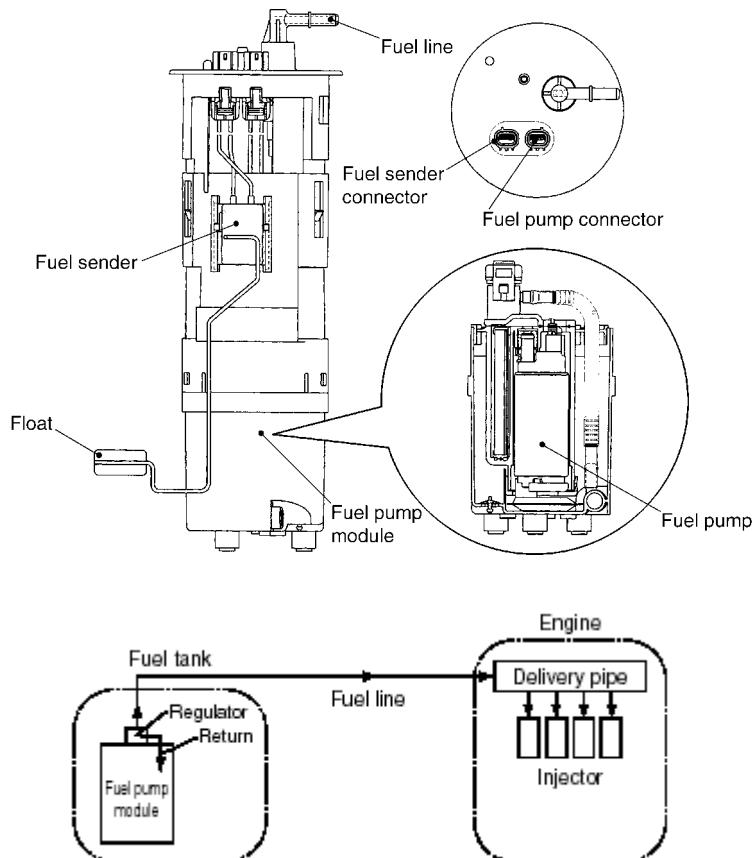

- Electrical Fuel Injection
- 4 in-line, independent throttles
- Large air filter box

# Fuel Supply

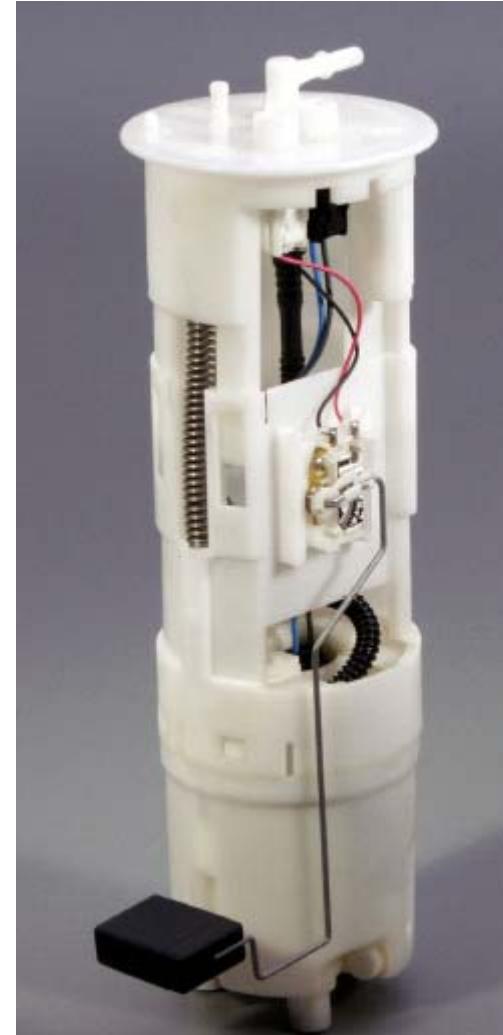

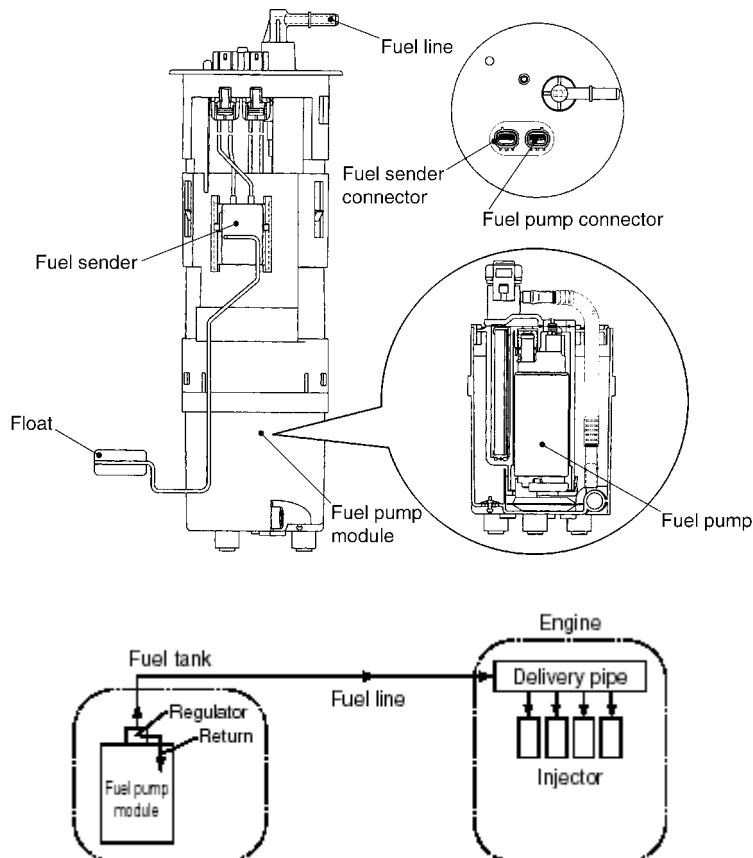

- Installed in fuel tank
- Fuel sender
- No return from the delivery pipe

# Fuel Supply

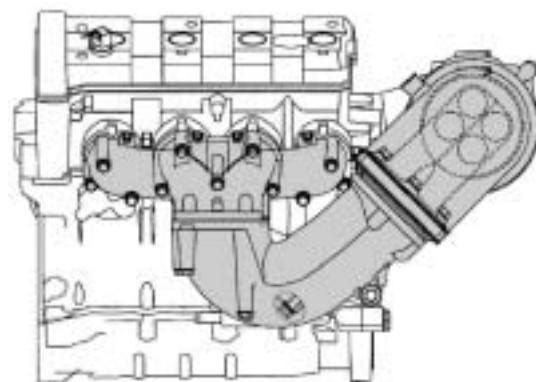

- Installed in fuel tank
- Fuel sender
- No return from the delivery pipe

# Exhaust engine

- Each cylinder with equally lengthened exhaust pipes
- Dual pipe structure

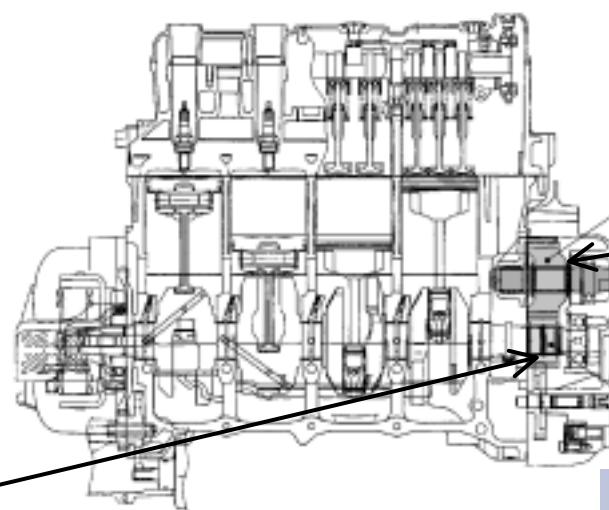

# Propulsion

➤ Reduction Gear ratio: 1.47:1

Drive gear

Driven gear

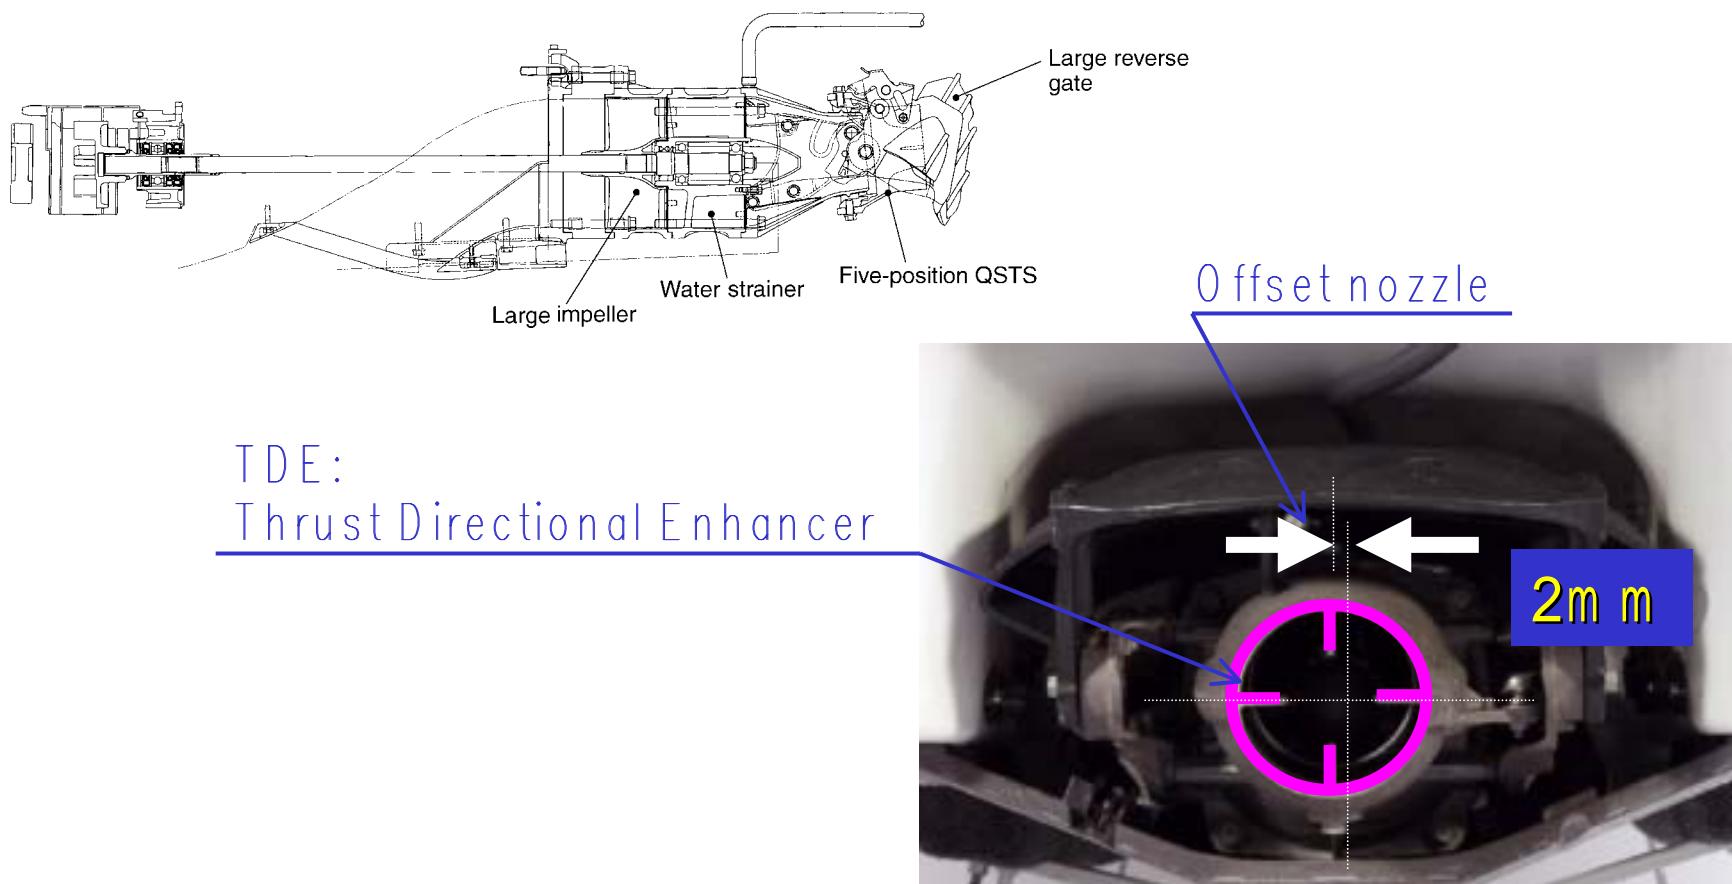

Coupler

# Propulsion

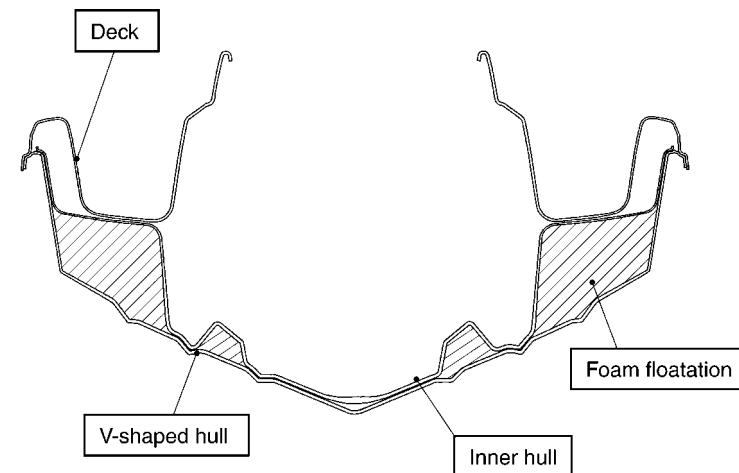

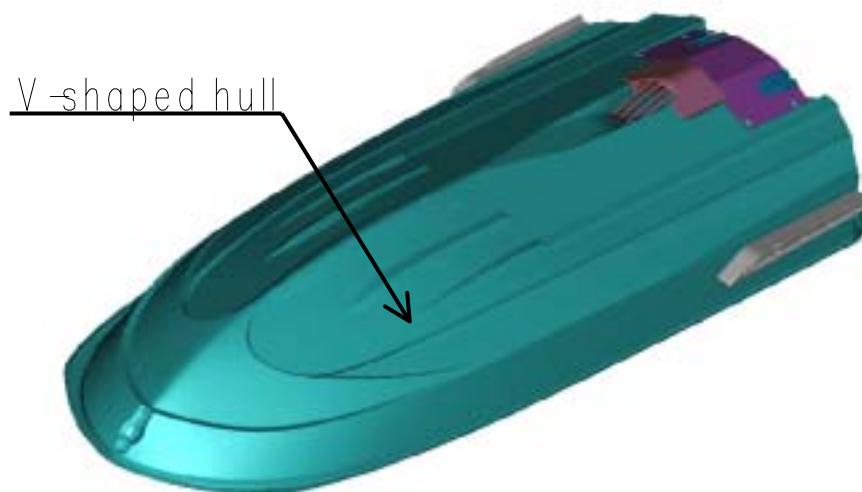

- Big jet pump with large, three-blade stainless steel, impeller with an outer diameter of 155mm
- Five-position QSTS

# Hull

- V-shaped hull
- Foam floatation in inner hull
- New sponson

# Deck

Front compartment  
with remote release lever

Stylish big front bumper

Large glove box with drink holder

Tow hook

Pneumatic lid support

Two piece, three passenger seat

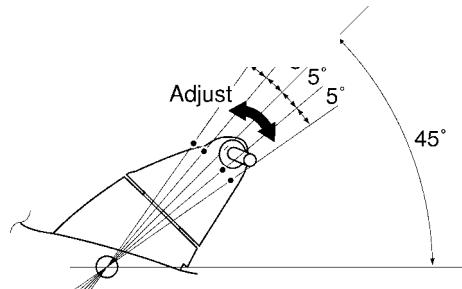

Large removable rear  
storage tub

# Controls

➤ Five-position  
Adjustable tilt steering

## Controls

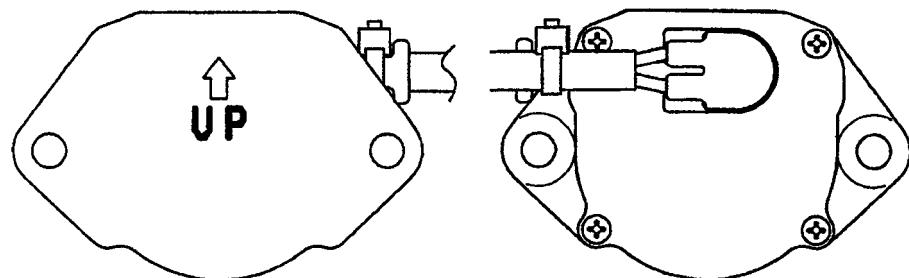

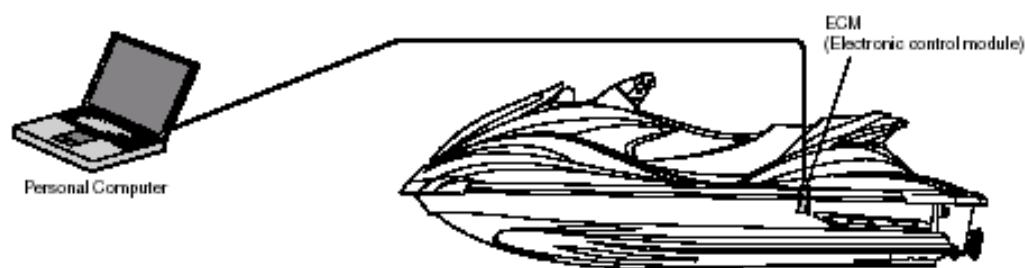

- QSTS
- Reverse lever

# Electrical

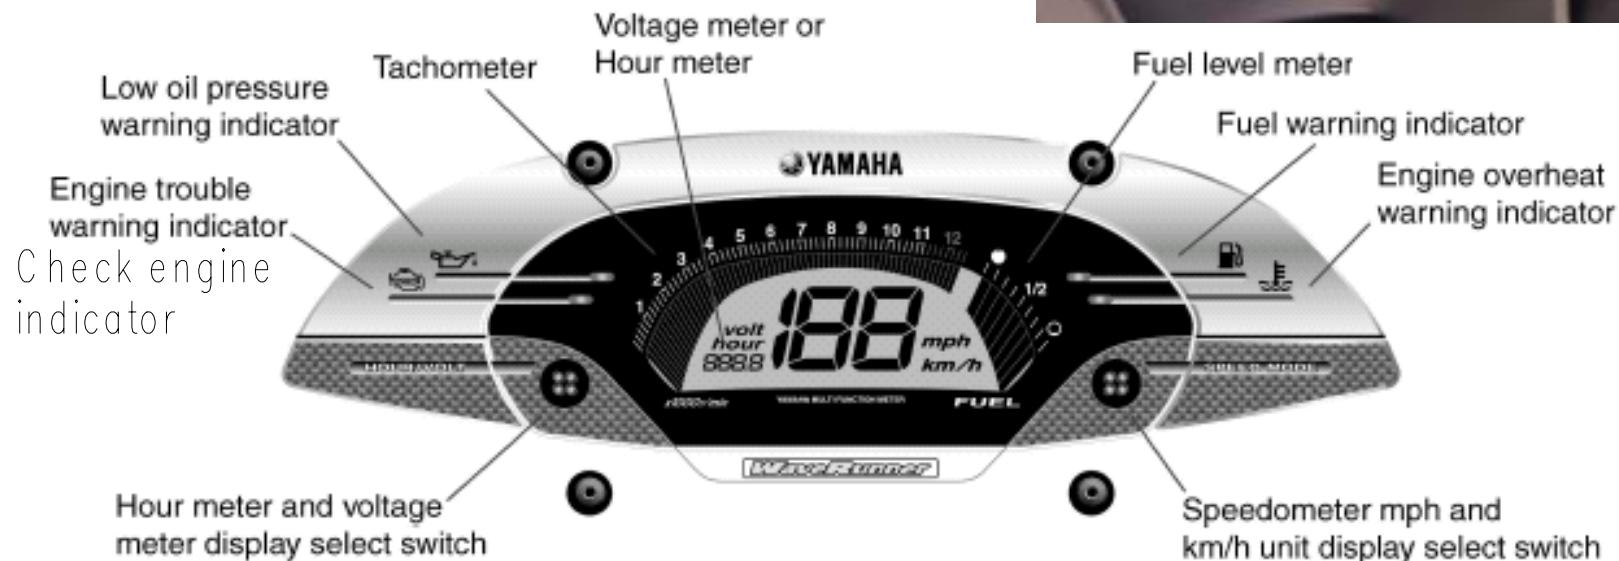

- Multifunction LCD meter
- Electric bilge pump
- Y.D.I.S.
- Slat detection switch

# Instruments

- Newly designed multifunction meter
- Meter panel with dual mode mile or kilometer
- Diagnostic code display

Engine Oil Amount for Each place

|         |     |         |
|---------|-----|---------|
| ENGINE  | 1.3 |         |
| FILTER  | 0.2 |         |
| OILTANK | 2.8 |         |
| TOTAL   | 4.3 | (LITER) |

# Oil Maintenance Check Tips

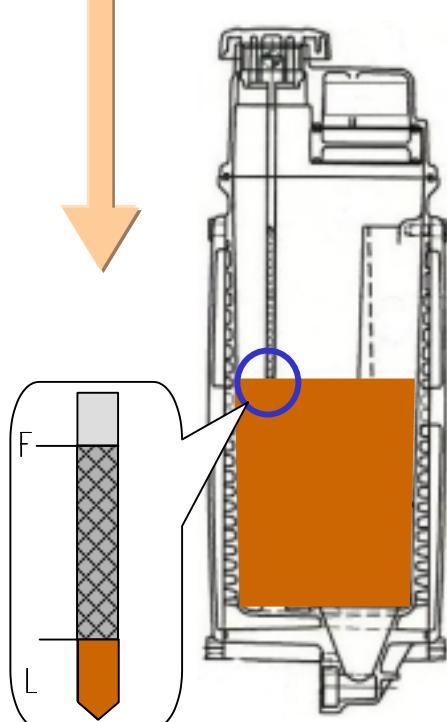

| Engine Oil Amount for Each place |     |         |
|----------------------------------|-----|---------|
| ENGINE                           | 1.3 |         |
| FILTER                           | 0.2 |         |
| OILTANK                          | 2.8 |         |
| TOTAL                            | 4.3 | (LITER) |

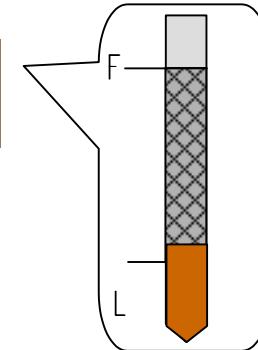

## OIL LEVEL CHECK

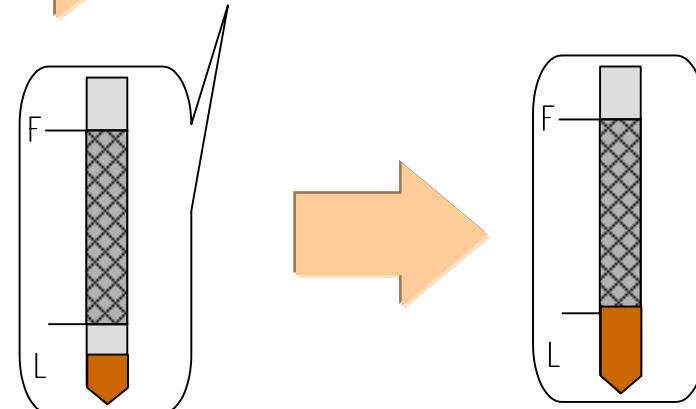

Check oil level in cold engine situation before every operation.

It is possible for 1 day to use, if there is more than .L. mark

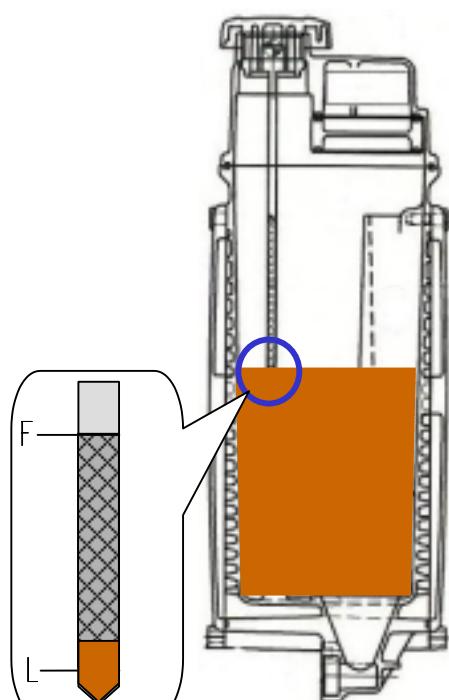

If oil level is under than .L. mark,  
Fill the oil around .L. mark on gauge.

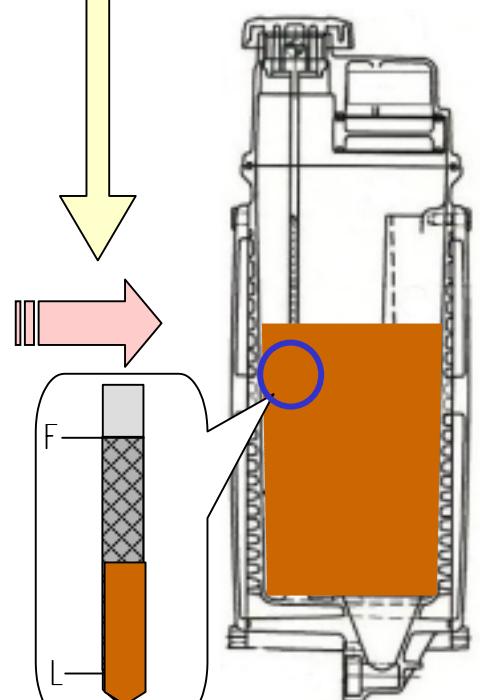

## OIL LEVEL ADJUSTMENT

Before oil level checking,  
fully warm up the engine,  
and then keep the trolling  
about 2min before engine  
stop.

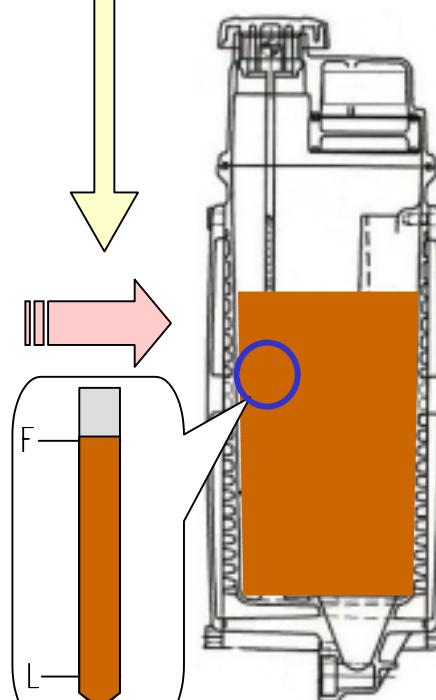

Cold engine

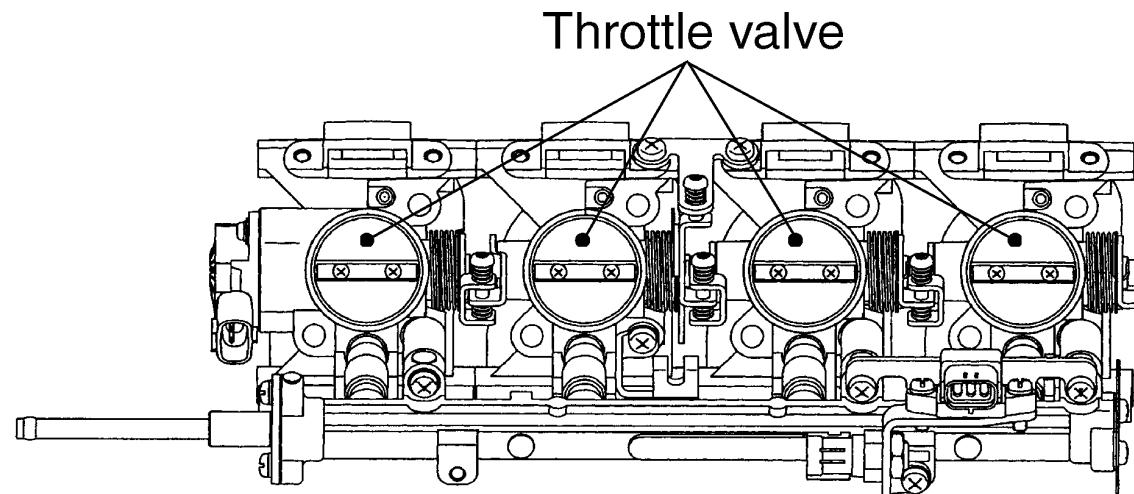

After warm up

Check oil level and  
fill the oil till .F. mark

After warm up

Example:  
Intake Valve Clearance (cold)

0.11-0.20 mm

Rounded value 150

Measured valve clearance is 0.24 mm

Replace pad 150 with pad 160

Pad No. 150 = 1.50 mm

Pad No. 160 = 1.60 mm

# Valve Clearance

| 1.43 - 1.47           | 235                       | 240 |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |  |  |  |  |  |  |  |
| 1.48 - 1.52           | 240                       |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |  |  |  |  |  |  |  |

Example:  
Exhaust Valve Clearance (cold)

0.25 - 0.34 mm

Rounded value 170

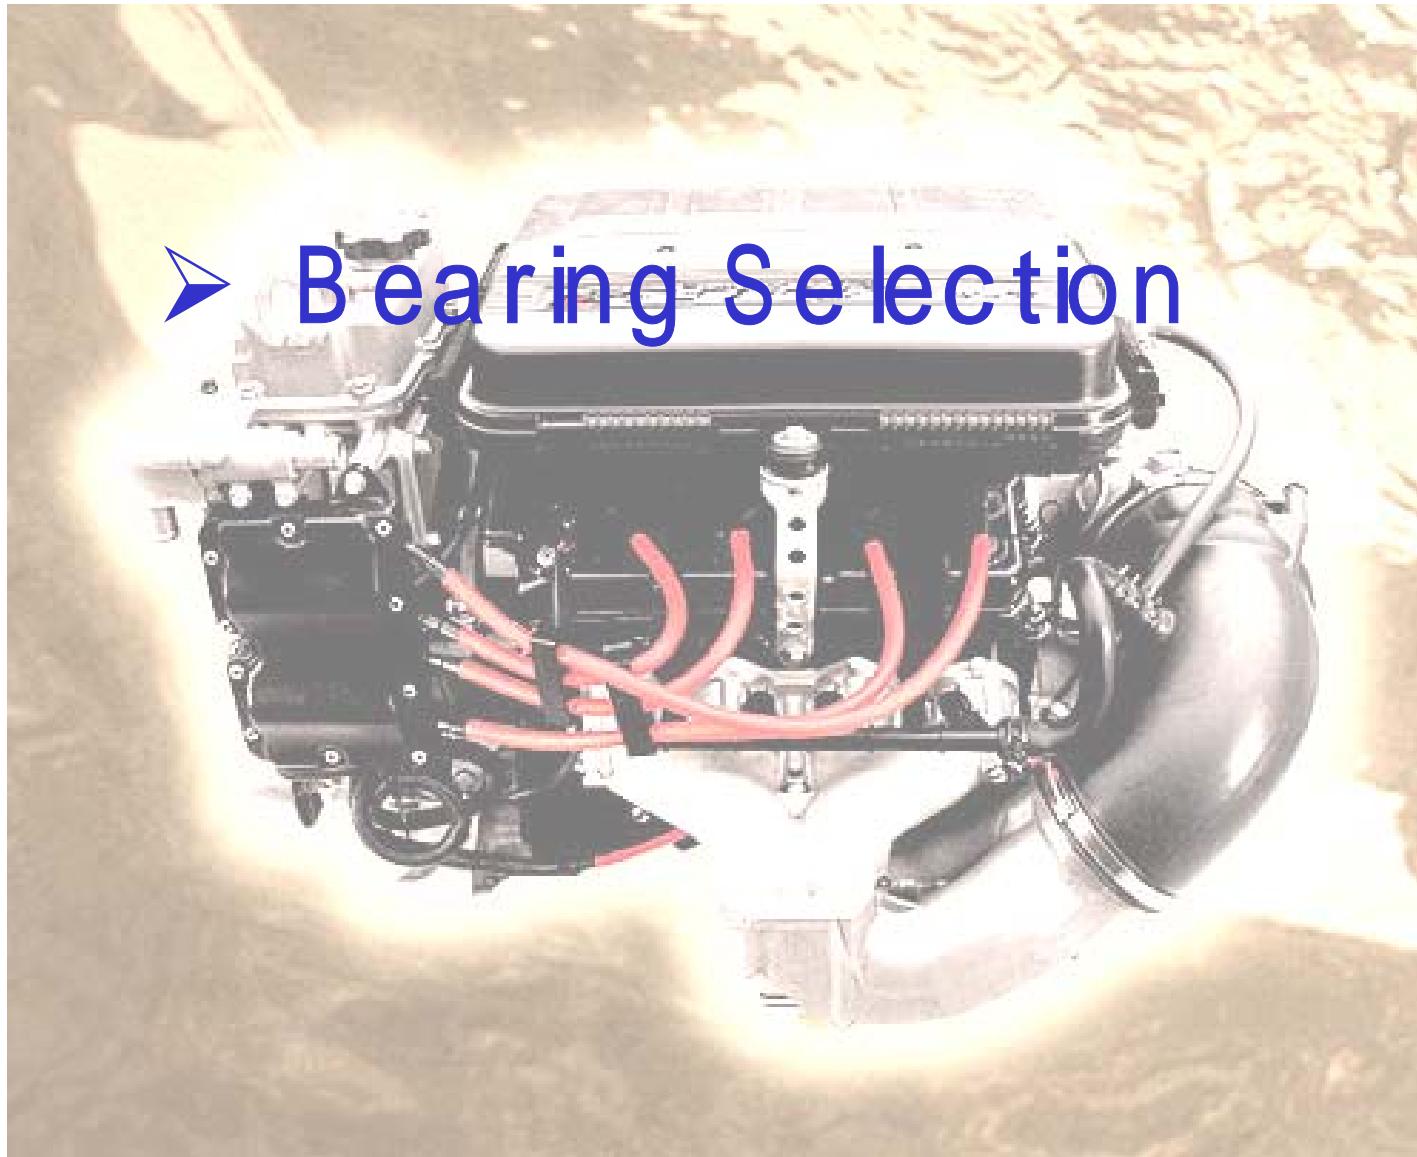

Measured valve clearance is 0.45 mm

Replace pad 170 with pad 185

Pad No. 170 = 1.70 mm

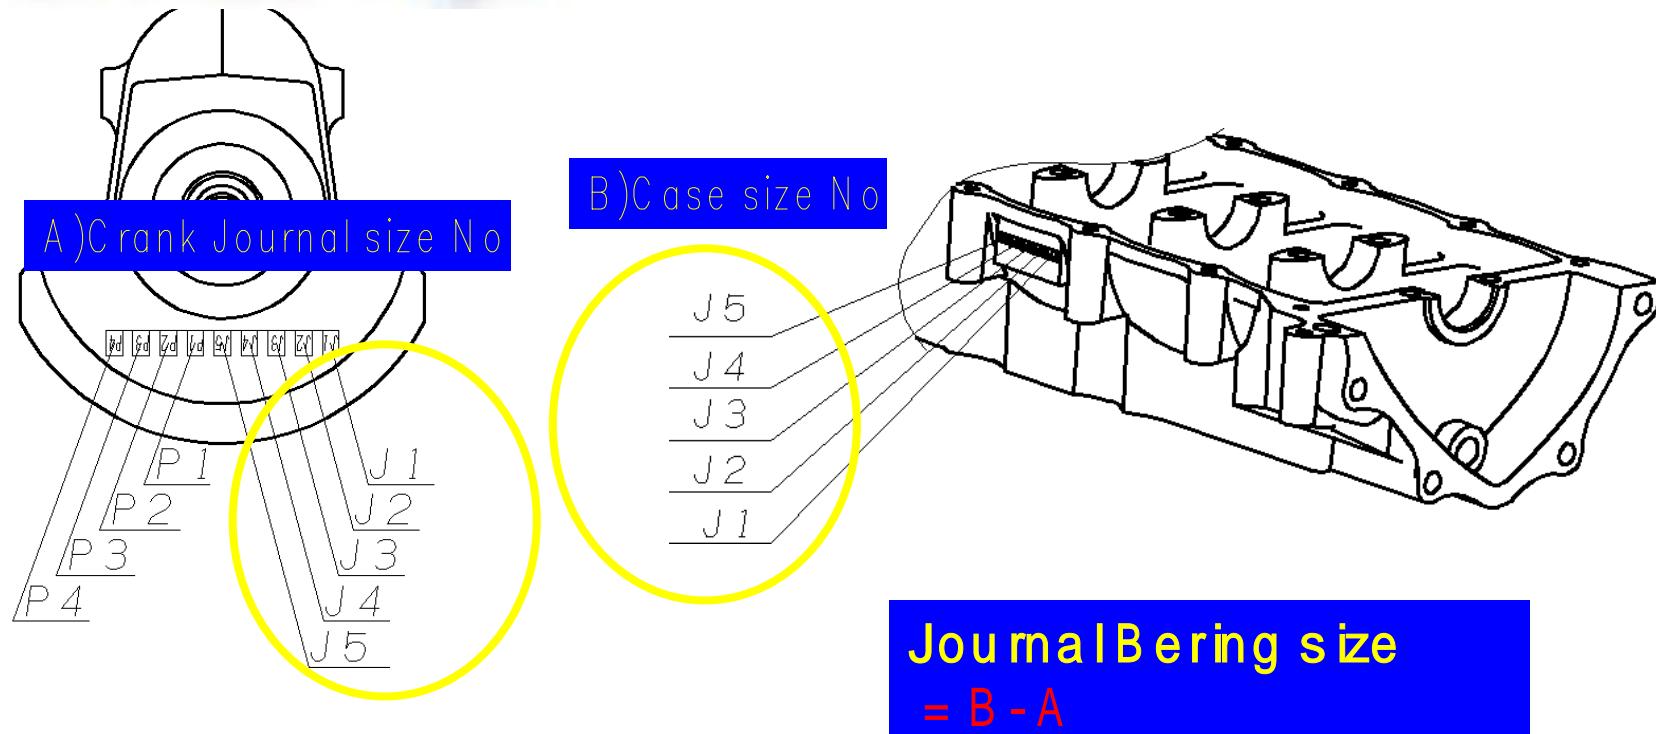

Pad No. 185 = 1.85 mm
