

Paint Mix Time Charts

Effective Date: Jun 1, 2012

PAINT MIX TIME CHARTS

These charts are provided to allow time for mixing paint and subsequent cleaning of equipment. The paint mix time can be determined by applying the total paint material allowance dollar amount for each labor operation to the Paint Mix Time Chart. The paint mix time allowance should then be submitted in the paint mix supplemental time field for that labor operation. For repairs with multiple labor operations, the material allowance for each operation should be used to calculate the total paint mix time. The total paint mix time should then be submitted in the paint mix supplemental time field on one paint labor operation on the job card. Total paint mix time allowance will not exceed .5 of an hour for any job card.
