

**Sliding Class - Sunroof Express Close**

When the sunroof switch is in the 'Express Close' state and the sunroof is not in a vent position, the sunroof will express close until the controller determines the sunroof has reached the fully closed position, or the switch transitions to another state after first returning to the 'Off ' position. The sunroof motion will cease if the switch transitions back to the 'Close' or 'Express Close' state after returning to the 'Off ' position first or the vent switch transitions to any active state.
